

ADPICS Travel A Processing - Rate Calculations

When rate amounts contain more than two decimal places, the calculation of the total amount on the Travel Detail Entry (PCHL1910 Screen) is truncated. For example, effective October 1, 1998, SMIS, the in-state mileage rate code, is \$.2575 per mile. If 85 miles is entered on the Travel Detail Screen, the total amount calculated for that line will be \$21.88 ($85 \times .2575 = \21.8875). The third and fourth place in the decimal is truncated (cut off) and the resulting amount is \$21.88.
